

Start with type. End up with *style*.

You just won't believe your eyes! TypeStyler III lets you do things with display type that you've never been able to do with desktop publishing before. Whether you are a professional graphic artist, web designer, animator, art director or novice, TypeStyler III brings style to your typographical creative visions.

TypeStyler III is a complete desktop publishing tool, providing the full range of features needed to quickly design, layout and print headlines and logos, as well as complete ads, signage, packaging and web site graphics.

Bend it. Squeeze it. Stretch it. Twist and rotate it. You can even add perspective . . . shadows . . . shades . . . patterns and colors. Or enhance text with sunburst and fades . . . There are literally millions of different possibilities.

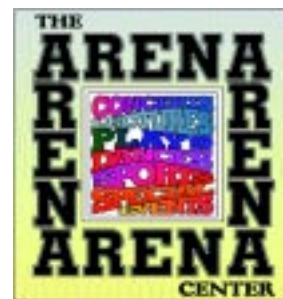

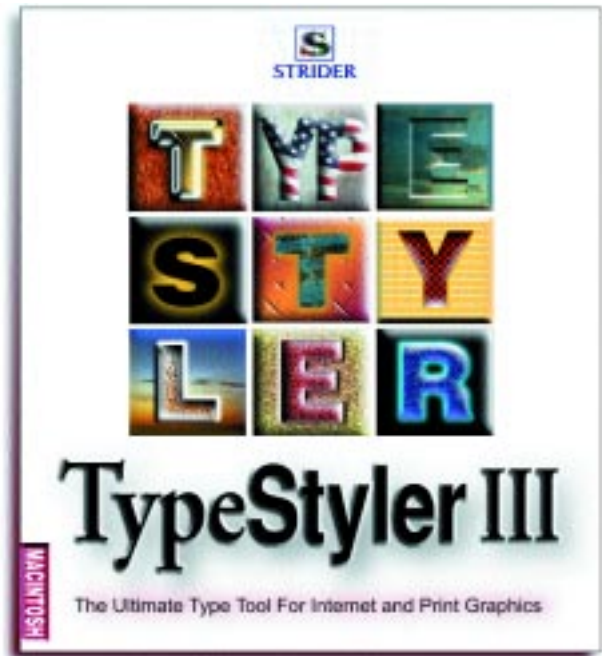

Here's more good news! TypeStyler III also exports and imports standard file formats! So you can easily bring a TypeStyler III creation into Adobe PageMaker,® Illustrator,™ Photoshop® or Quark XPress®.

Likewise, you can import artwork from other graphics programs into TypeStyler III and then add styled text to create impressive signs and designs.

And if that weren't enough, TypeStyler III includes one hundred of the world's most spectacular display fonts. Plus the ability to work with virtually every commercially available PostScript® and TrueType font.

You'll be amazed at how quick and easy it is to achieve effects that were once possible only with expensive photo-typesetting equipment or the costly handiwork of skilled graphic artists.

- Always editable, author once - use anywhere.
- Bend, twist, distort, arch, stretch, flip, rotate, add depth, textures, glows, illumination, soft and cast shadows, opacity - Create literally millions of different effects by combining various character and shadow styles.
- Imports & exports EPS, PICT, GIF, JPEG, Illustrator, and Photoshop File formats. Ensures compatibility with page layout, illustration and drawing applications - including Adobe Illustrator, PageMaker, Photoshop, Macromedia FreeHand,® Quark XPress, MS Word® and Claris Works®.
- Now includes built-in drawing tools allowing you to easily create and edit custom artwork within TypeStyler III.
- Delivers crisp, professional output on either QuickDraw or PostScript printers! TypeStyler gives PostScript-like effects on non-PostScript devices.
- Includes a tool to create custom backdrops for your creations at the click of a mouse.
- Includes Automatic or Manual Kerning and Leading plus Variable Letter and Word Spacing.
